

Rheozan® BLC*

Water, Cellulose, Cellulose Gum, Xanthan Gum, Glycerin, Sodium Benzoate

New biodegradable natural rheology agent

Rheozan® BLC is a ready to use liquid natural polymer solution delivering high suspension power in rinse-off cosmetic products, yet without any impact on the formulation viscosity. This novel polymer creates a three-dimensional network of insoluble cellulose fibers which stabilize dispersion of particulate matters at low inclusion levels, without affecting final or perceived viscosity of the formulation.
